staflow

MULTI-TENANT LTC STAFFING PLATFORM

Zero Fees.
Zero Billing Errors.

Complete shift verification and multi-home agency oversight for long-term care networks.

Free for long-term care homes · staflow.ca

Agency staffing has a hidden line item. Most homes never see it.

Every long-term care home in Ontario depends on agency staff to keep units safe. Few have a reliable way to verify what they are billed for. The result is a quiet, recurring leak: hours that were rounded up, shifts that ran short but invoiced long, timesheets that nobody had time to check, and a finance team reconciling paper against spreadsheets weeks after the care was delivered.

Where the money goes

- **Unverified timesheets.** Agency hours are self-reported, signed at the end of a tired shift, and rarely compared with when the person actually arrived and left.
- **Rounded and inflated hours.** A 7 h 20 min shift billed as 8 hours is a 9% overcharge. Across every shift, every agency, every month, rounding is a budget line of its own.
- **Manual audit overhead.** Director of Care and AP time spent chasing discrepancies, re-sending invoices and settling disputes — work that produces no care and no savings.
- **Software subscription fees.** The tools sold to fix this charge the home a licence per seat, per site, per month — so the home pays twice: once for the problem and once for the software.

Why pay monthly SaaS fees just to manage staffing?

Staflow is 100% free for LTC homes.

No software fees. No seat licences. No implementation fee. No renewal.

$0 The Staflow guarantee

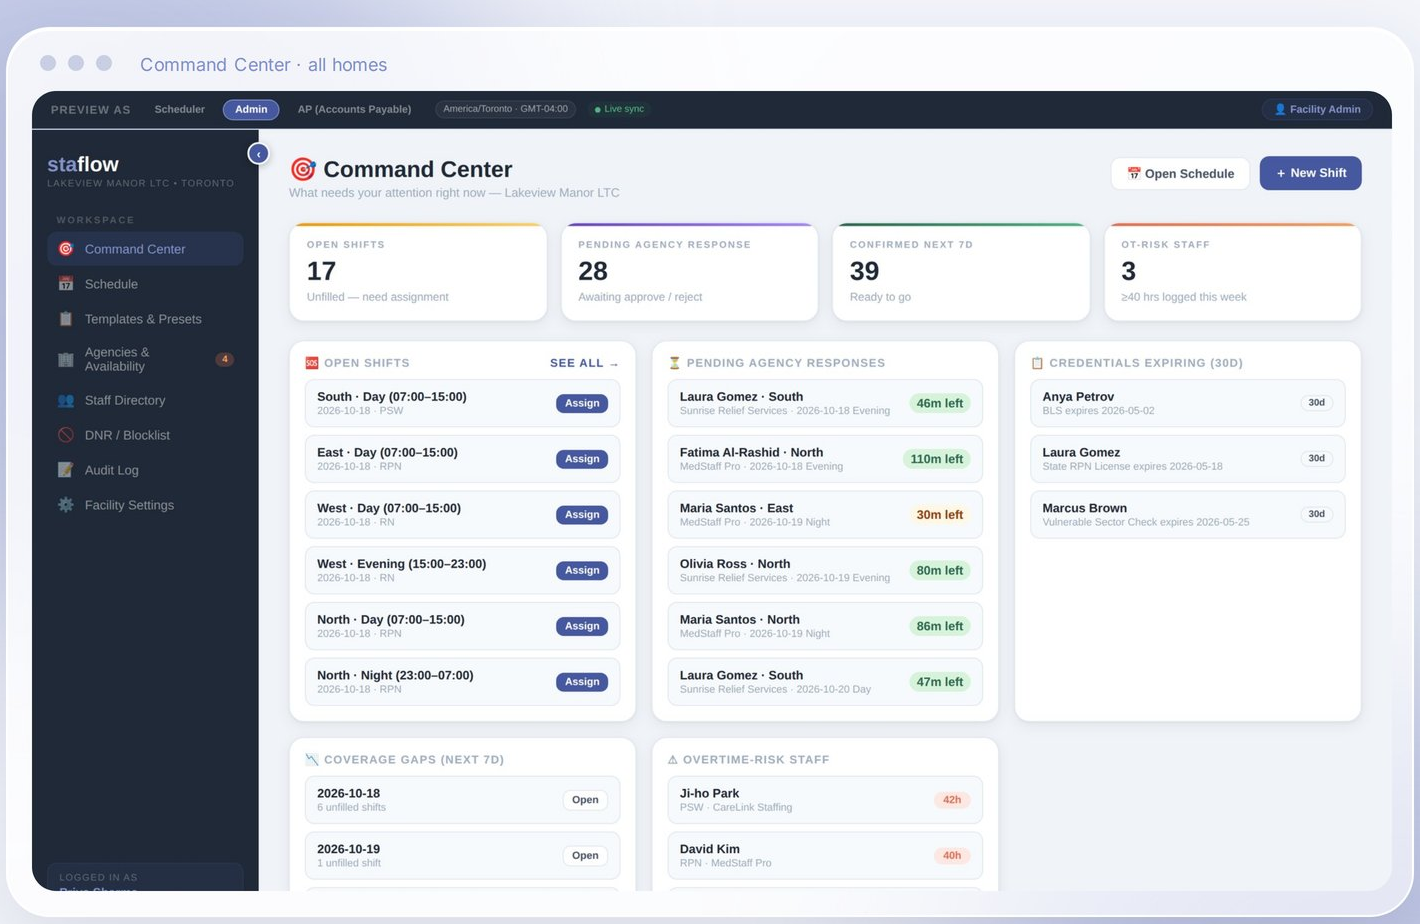

Staflow is free for long-term care homes — no licence, no per-user fee, no per-site fee, no contract term. Not a trial, not a tier. The platform is funded by a small per-shift fee paid by the staffing agencies that use it to receive your requests and bill you. Your home pays $0, and every agency invoice you receive is built from clock-in and clock-out times verified to the minute at your own kiosk.

Today a home pays twice. With Staflow it pays nothing.

Every home. Every agency. One view.

Staflow is built as a multi-tenant platform from the ground up. Each home runs its own schedule, its own kiosk and its own agency relationships — and corporate sees all of it at once, live, without asking anyone for a report.

Corporate dashboard: coverage, pending agency responses, overtime risk and credential expiries across the network, with one-click drill-down to any home.

Single pane of glass

Open the corporate dashboard and see, for two homes or fifty: open shifts and pending agency responses, coverage gaps for the next seven days, agency utilisation by home, unit and role, hours and spend month-to-date, and overtime-risk staff before the overtime happens. Drill from the network down to a single shift in three clicks.

Role-based enterprise architecture

Corporate VP / Regional Director

Network-wide dashboards, spend by home, agency performance, invoice status. Read everything, change nothing by default.

Accounts Payable

Every agency invoice across every home in one queue, with the verified hours behind each line.

Director of Care / Scheduler

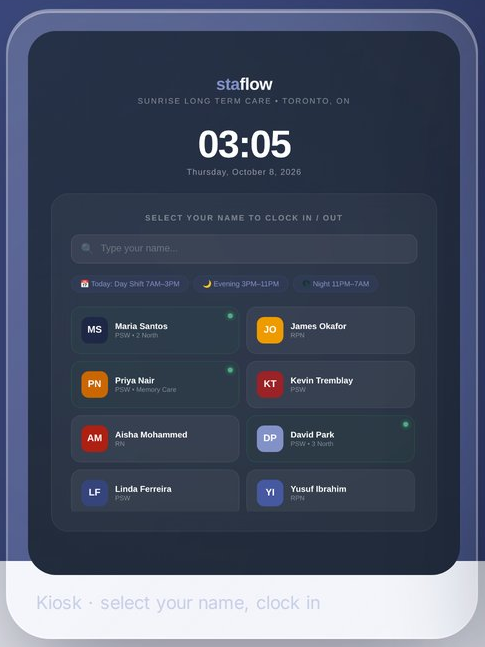

Their home only: schedule, requests, approvals, kiosk settings and agency directory.

Agency

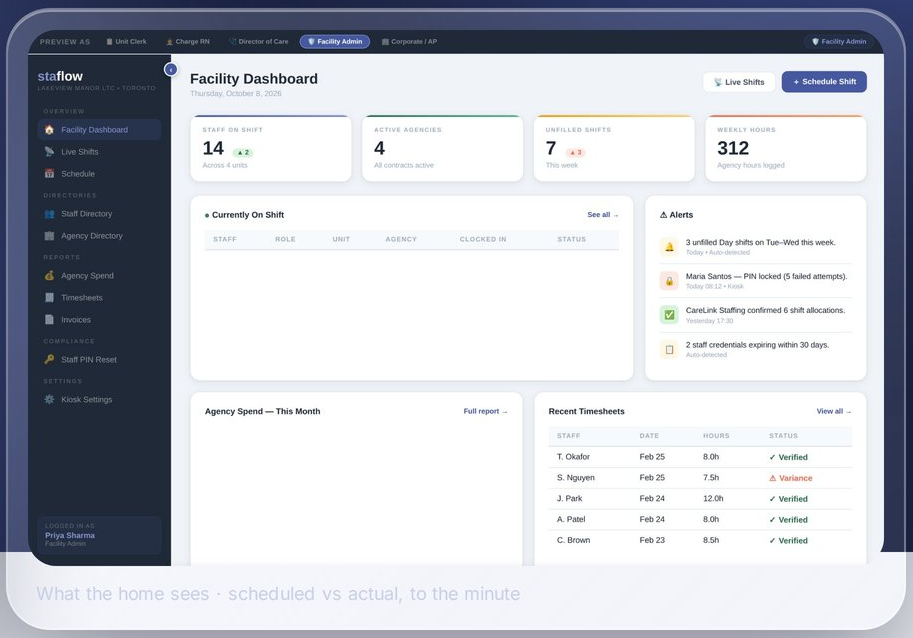

Their own staff, requests and invoices. Agencies never see another agency, or your internal notes.

The timesheet is gone. The kiosk is the record.

Agency staff clock in and out on a locked-down tablet at the shift station — the same way they would at any other workplace. The time is recorded to the minute, attached to the scheduled shift, and visible to the home and the agency at the same moment. There is no paper, no end-of-shift signature, and nothing to reconcile later.

Kiosk · select your name, clock in

What the home sees · scheduled vs actual, to the minute

Secure on-site kiosk

A kiosk, mounted at the unit or the main entrance, running only the Staflow kiosk. The device is enrolled in enterprise mobile device management and locked to a single application: no browser, no settings, no way to run anything else. The home chooses the clock-in window, grace period and whether consecutive shifts need a separate clock-in.

Minute-by-minute precision

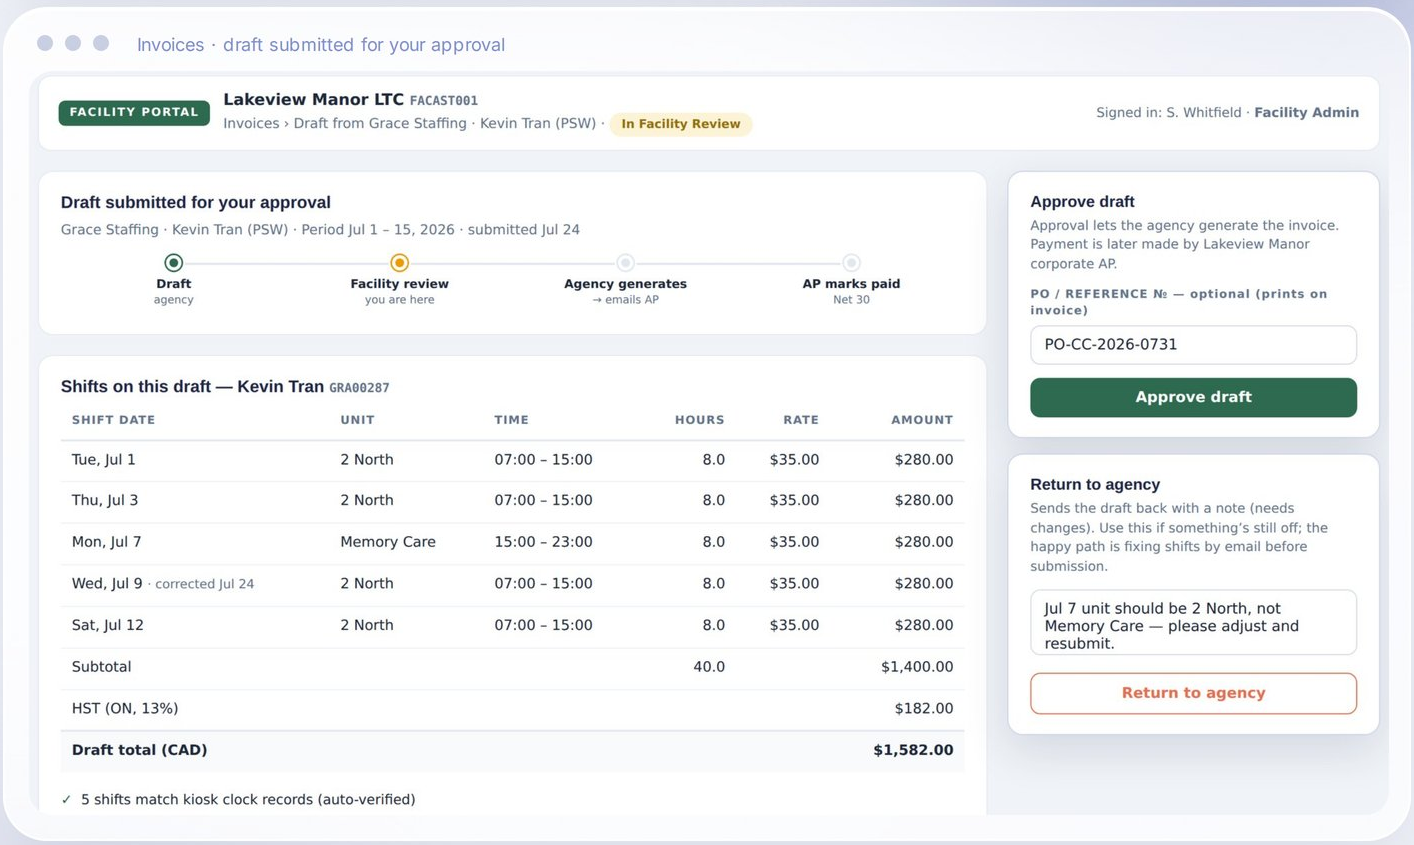

- Clock-in and clock-out are timestamped to the minute against the scheduled shift — a 7 h 20 min shift is billed as 7 h 20 min.
- Every clock event is tied to a named staff member and a specific shift, so a late arrival or early departure is visible immediately, not at month end.
- Corrections are controlled: the Director of Care approves the record that becomes the invoice, and every change is logged with who made it and when.
- No-shows, overnight shifts that cross midnight and back-to-back doubles are handled by the system — no phantom shift, no missed one.

Rounding up is not a policy problem. It is a measurement problem — and the kiosk measures.

Invoices arrive already verified.

Because the kiosk record and the invoice come from the same system, an agency invoice in Staflow is not a claim to be checked — it is a report of hours your own home already approved. One invoice per staff member per billing period, every line traceable to a clock-in, a clock-out and an approver.

1. Shift scheduled
2. Clock in / out at kiosk
3. DOC approves hours
4. Agency drafts invoice
5. AP approves & pays

Invoice review: every shift line checked against the kiosk clock record; approve, or return it to the agency with a note. The invoice number is only issued once you approve.

Pre-verified invoices

The agency drafts the invoice from the approved shift records; it cannot add hours that were not clocked. Your Director of Care reviews it on the same screen the hours were approved on and either approves it or returns it with a note. Only an approved invoice receives a number and reaches accounts payable. Rates, overtime and statutory holiday premiums are applied from the agreed rate card — the same way every time.

Zero administrative overhead

- Reconciliation falls from days of spreadsheet work to minutes of review — the hours and the invoice are the same record.
- Disputes disappear with the cause: a short shift is short on the invoice; a late start is a late start on the invoice.
- Complete audit trail: every request, clock event, correction, approval, return and payment status is logged with user and timestamp — exportable for auditors, the Ministry or your board.
- Spend visibility before the invoice lands: month-to-date agency hours and cost by home, unit and role.

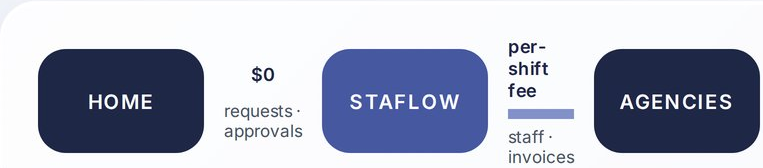

A verified invoice is a short conversation. Staflow makes every invoice a verified invoice.

You hold the purchasing power. Set the standard.

Long-term care homes decide which agencies they work with, and on what terms. Adding one line to those terms - “shifts are requested, verified and invoiced through Staflow” - gives every agency the same rules, the same record and the same proof of hours, and gives the home one way of working across every vendor instead of a different process for each.

Why mandate Staflow

- **One standard, not twelve.** Every agency submits requests, clocks staff and invoices the same way, so your team learns one process and your data is comparable across vendors.
- **Transparency you set, not negotiate.** The record of hours belongs to the home, is created at the home, and is the only basis for an invoice.
- **Keep the agencies you already use.** Staflow does not replace your vendors or sit between you and them; it is the shared workspace you both use. Nothing is exclusive.
- **No cost to you — and none to the agency until they work.** Agencies pay a small fee per completed shift; nothing up front, nothing for an agency that is not staffing you.

Turnkey onboarding

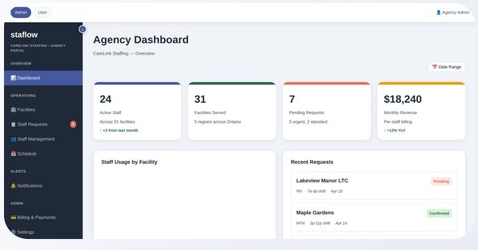

An agency is live in hours, not weeks: the home links the agency, the agency adds its staff and rate card, and the next request flows through the platform. Staflow onboards each agency directly and supports them — your team does not run a rollout for your vendors.

What to tell your agencies

“Effective [date], all agency shifts at our homes will be requested, verified and invoiced through Staflow. There is no cost to our homes; your per-shift fee replaces the time you currently spend on timesheets and disputed invoices. Staflow will onboard your team directly.”

The win–win for agencies

- **Faster shift broadcasting.** A request reaches the agency instantly; they assign a named staff member and you see the confirmation on your schedule.
- **Instant shift claims.** Open shifts are filled from the agency portal in minutes, with credentials and rates already on file.
- **Frictionless invoice approval.** Hours are verified at the kiosk, so invoices are approved on review — no back-and-forth, no disputed lines, no delayed payment.

Canadian infrastructure. Locked-down devices. Live in days.

Canadian infrastructure

Staflow runs on Google Cloud Platform in the Toronto region. Your data is stored and processed in Canada, encrypted in transit and at rest, with daily backups and environment isolation between homes. The platform is designed to support your obligations under PHIPA and PIPEDA: role-based access, least-privilege permissions for every user, and a full activity log of who saw and changed what.

Turnkey MDM lockdown

Every kiosk tablet is enrolled in enterprise mobile device management before it reaches your home. Devices are locked to the Staflow kiosk application only, remotely monitored, remotely wiped if lost, and updated centrally - your IT team never touches them. Staff authenticate with their own credentials at the kiosk; no shared logins, no passwords on sticky notes.

Rapid rollout

- **Days, not months.** A home is configured — units, roles, rate cards, agencies, kiosk — in a single working session with Staflow.
- **Zero IT infrastructure.** Nothing to install, nothing to integrate before go-live. Staff use any browser; the kiosk arrives configured.
- **Network-wide in one plan.** Corporate roles, home-level roles and agency links set up once, applied across every site.
- **Supported by the people who built it.** Direct access to the Staflow team through pilot and rollout — not a ticket queue.

The security conversation should be the shortest one you have with us.

Hosted on Google Cloud, Toronto • Data resident in Canada • Encrypted in transit and at rest • Role-based access • Full activity log • MDM-managed kiosks • Daily backups

$0
software fees for homes
