staflow

AT A GLANCE

Every agency shift. One clear view.

Staflow is a multi-tenant staffing platform built for long-term care networks. Agency staff clock in at a locked-down kiosk, the home approves the hours, and the agency invoice arrives already matched to the minutes — across every home and every agency you work with.

$0 for long-term care homes

No software fees, no seat licences, no implementation fee, no renewal. Agencies pay a small fee per completed shift — nothing up front, nothing until they work.

Verified to the minute

Clock-in and clock-out are timestamped against the scheduled shift. A 7 h 20 min shift is billed as 7 h 20 min — the Director of Care approves the record that becomes the invoice.

Every home, one view

Open shifts, coverage gaps, agency utilisation, spend month-to-date and overtime risk for two homes or fifty — with drill-down to any single shift in three clicks.

Keep the agencies you already use

Staflow does not replace your vendors or sit between you and them. One standard for requests, hours and invoices across every agency — nothing exclusive.

How it works

1. **Shift scheduled and sent to your agencies**
2. **Staff clock in and out at the kiosk**
3. **Director of Care approves the hours**
4. **Agency drafts the invoice from approved records**
5. **Accounts payable approves and pays**

Built for Ontario LTC. Hosted on Google Cloud in the Toronto region, data stored and processed in Canada, designed to support your PHIPA and PIPEDA obligations. Kiosk tablets arrive enrolled in mobile device management and locked to the Staflow app. A home is configured in a single working session; a network in one plan.

See it in two minutes
